1. The first part of the paper is devoted to the study of the asymptotic behavior of the solutions of the system (1) as $t \rightarrow \infty$. It is shown that the solutions of the system (1) are bounded and tend to zero as $t \rightarrow \infty$ if the matrix A is stable. The second part of the paper is devoted to the study of the asymptotic behavior of the solutions of the system (1) as $t \rightarrow \infty$ if the matrix A is not stable. It is shown that the solutions of the system (1) are bounded and tend to zero as $t \rightarrow \infty$ if the matrix A is not stable and the matrix B is positive definite.

1. The authors are grateful to the Ministry of Education of the Russian Federation for the financial support of the work.

1. Для того чтобы не терять из виду адекватности модели, необходимо использовать не только математический аппарат, но и качественные методы исследования. В частности, необходимо использовать методы, позволяющие оценить качество модели, ее способность к обобщению, ее устойчивость к изменениям параметров, ее способность к адаптации к новым условиям.

1. The first step is to identify the problem. In this case, the problem is that the company is not meeting its sales targets. The manager needs to determine why this is happening and what can be done to improve performance.

$$f(x) = 2048x^{10} - 32768x^9 + 262144x^8 - 1572864x^7 + 7864320x^6 - 31457280x^5 + 94371840x^4 - 238873600x^3 + 477747200x^2 - 524288000x + 262144$$
